

Keeping Law Enforcement on the Scene Around the World

Whether for evidentiary purposes, investigations, training or other operational initiatives, law enforcement agencies across the globe are deploying EcoDigital's DIVA suite of software solutions to meet the demands of an increasingly complex and demanding law enforcement environment.

DIVA – The Virgin Islands Police Department is At-the-Ready

The U.S. Virgin Islands are a Caribbean paradise. Yet sitting in the crosshairs of hurricane alley makes it especially vulnerable to losing critical digital assets. So along with the typical considerations of managing a growing volume of video assets the VIPD must take extra precautions to ensure their digital assets are safe and accessible under any and all circumstances. Of course, efficiency is important to the Department, so storing and accessing video manually on tape was time consuming and cumbersome.

DIVA comes through on all counts. They invested in EcoDigital's CORE to archive and access essential video more easily, efficiently and securely. DIVA's ability to store video in the Cloud allows the department to zero in on the video they need quickly, in a format that is more accessible than if done manually. With DIVA the Virgin Islands Police Department is ensuring mission critical continuity while staying on the scene efficiently and securely.

DIVA – On Target for the Buenos Aires Police Department

When the Argentinian government gave the Buenos Aires Policia greater leeway to use and collect video, it created an exponential increase in digital video volume. 6,000 video surveillance cameras throughout the city are contributing to as many as 3,600 monthly requests for video for evidentiary, informational and investigative purposes. Suddenly the spotlight was on the Department to find a solution for capturing, storing, accessing and transferring those digital assets. The four "S's" of video management became paramount: Speed, storage, security and savings, along with ensuring the confidentiality, availability and inalterability of the evidentiary video.

DIVA is on the job. As the Policia put it, "DIVA has proven to be a flexible, scalable, reliable, and media-centric solution." It provides the department the freedom and flexibility to choose the best storage technology and adjust easily to future technologies. It also integrates easily with editing technologies like Adobe and AVID, and since it's compatible with a large variety of file formats it performs excellently in Partial File Restores, creating efficiency when composing Digital Judicial Files with digitized video images. With DIVA, editors can integrate digital judicial files exportable in Optical Disk with all media evidence. From capture to access to retrieval to responsiveness, DIVA is keeping the Buenos Aires Police Department on the scene.

DIVA – An Open and Shut Case for the US Drug Enforcement Administration

With the increase in illegal drug activity and enforcement over the years the role of the DEA has expanded, and along with it so has the volume of video content. Having accumulated as much as 7000 hours of content on DVDs and analog video tape the agency needed a cost effective and practical solution for digitizing and storing these critical assets that represented the vast activities of this active and respected Federal organization. Once digitized, it would then be available for additional editing/processing using their editing system. Content originated from a variety of sources and included internal training tapes for agents, press conferences, speeches from leaders of the organization and surveillance video.

A DIVA turnkey solution hit the bullseye. DIVA Core with DIVA View allows the DEA to digitize tape and make a master format, an editing format and a low resolution proxy format all at the same time. The master and editing versions get sent to DIVA Core and the proxy goes to DIVA View, enabling them to search for and restore the higher resolution content to the editing environment. With the ability to collect thousands of hours of video content in one place, and manage it with state-of-the-art digital video technology, this high profile federal law enforcement agency is achieving efficiency and cost effectiveness while preserving a wide array of digital assets.

About EcoDigital: EcoDigital's DIVA is the world's leading and most trusted content storage management system, providing software solutions to over 1000 clients and partners across the globe and managing more than 1 exabyte of the world's mission-critical media assets. Its R&D team is comprised of tenured industry experts and is recognized for best-in-class customer support. Its product depth and breadth is second to none, and is the choice of forward-thinking organizations where digital video assets are critical to operational performance.
