

EcoDigital Introduces Further CSM Innovation With New 8.1 Release of the DIVA Software Suite

ATLANTA — Oct. 12, 2020 — EcoDigital today announced the upcoming release of **DIVA 8.1**, which will add valuable new capabilities along with more than 30 performance enhancements to the company’s renowned DIVA Software Suite for digital asset management. This new software release represents the third major software upgrade and enhancement to the DIVA Software Suite in the past 16 months.

“DIVA is the world’s leading and most trusted content storage management system, and ongoing innovation has been critical to keeping DIVA ahead of the curve in meeting market requirements,” said Geoff Tognetti, chief technology officer at EcoDigital. “We have continually invested in the future of DIVA, and we’re confident that our customers will find that version 8.1 offers capabilities that can benefit their operations now and going forward.”

Enhancements in DIVA 8.1 include expanded and improved configuration, reporting, and notification options as well as a new RESTful API, a new metadata and object database, and an array of fixes and updates — including performance improvements for Amazon S3 — since the release of DIVA 8.0 just four months ago.

DIVA 8.1 will begin shipping early in November. Further information about the DIVA Software Suite and EcoDigital is available at goecodigital.com.

###

About EcoDigital

EcoDigital is the world’s leading content storage management (CSM) solution provider, with more than 1,000 partners using the company’s DIVA software to manage 1,500+ petabytes of digital media assets. On premises and in the cloud, DIVA solutions drive efficient life cycle media asset workflows, simplify discovery and monetization of assets, enable seamless collaboration across teams and systems, and accelerate business transformation.
